

TotalHeal FireWarden

Next - Generation Firewall (NGFW)

The firewall of every office, on BranchEdge appliances you manage from one console: rules by application and person, threat intelligence, IPS, HTTPS inspection, antivirus on downloads, and a cloud firewall for branches.

Cloud (SaaS)

On-premises

Air-gapped

The challenge

Branch firewalls are bought one by one, configured one by one and forgotten: rules nobody remembers adding, a different policy at every site, threat intelligence that never reaches them, and a change made at night that cuts the office off until someone drives there.

The answer

FireWarden runs on TotalHeal BranchEdge appliances — any Linux box with two or more ports, set up with one installer command — and every appliance runs the same policy from the TotalHeal console. Each change is compiled for each appliance, versioned, and applied in one transaction; an appliance that cannot reach the cloud after a change goes back to the last good policy on its own after five minutes.

Status	Available
Deploys as	Cloud (SaaS) · On-premises · Air-gapped
Runs on	Appliance; Data plane
Priced per	appliance per year
Trial	30 days, up to 2 appliances
Licence	Sold on its own; one TotalHeal console

Supported platforms

BranchEdge appliance

Debian 12 or Ubuntu 22.04+, x86-64 or arm64, two or more network ports

Virtual or cloud

Any hypervisor or cloud instance running the same Linux

How it works

1

Install

Turn any Linux box with two ports into a BranchEdge appliance with one installer command.

2

Place

Give it a site and its ports — or register its serial number and let it set itself up.

3

Write

Write one policy: rules, applications, groups, IPS, inspection.

4

Apply

Each appliance gets its compiled version within 30 seconds, applied in one transaction.

5

Watch

Hit counts, blocks and IPS and malware alerts arrive in the console.

Reference architecture

Every BranchEdge appliance takes its compiled policy from FleetControl and reports hits, blocks and alerts; branches can send their internet through a hub appliance.

Key capabilities

- 

Rules by what and who

Ordered rules by zone (WAN, LAN, guest, the other offices), address and service objects, applications — 31 built in, from Microsoft 365 and Zoom to BitTorrent and Tor, recognised by the names they resolve, their address ranges and ports — and people's groups, from who signed in through NetworkGate and SurfGuard groups.
- 

Threat intelligence both ways

Every active IP indicator from your TotalHeal threat intelligence is blocked in and out on every appliance; add your own addresses with a reason. SYN-flood and connection limits per address stop simple floods.
- 

Know what each rule does

Each rule has its own hit counter on every appliance, summed in the console; rules at least 30 days old that matched nothing for 30 days are listed as unused.
- 

IPS

On the Professional tier, Suricata inspects the traffic of rules you mark — detecting and alerting, or blocking — with TotalHeal rules (EICAR, Log4Shell, path traversal, PowerShell download cradles, SSH brute force ...) and your own Suricata rules. Alerts arrive in TotalHeal with the source, target and signature.
- 

HTTPS inspection

On the Professional tier, allow rules marked Decrypt send web traffic through an inspection proxy on the appliance that presents certificates from your organisation's TotalHeal root and checks each site's real certificate. Online banking and the categories and domains you exempt pass through untouched.
- 

Antivirus in transit

On the Elite tier, files people download — programs, archives, documents — are checked with ClamAV on the appliance before they are delivered; malware is replaced by a page naming it and raises a high alert.

Cloud firewall for branches

A branch can send its internet through the tunnel to a hub appliance — in the TotalHeal cloud or your data centre — where FireWarden decides and takes it out, so small offices need only a basic box.

Safe changes

On the Professional tier a policy change can wait for a second administrator; every version is kept, an appliance can be pinned to an older one, and an unconfirmed change can be rolled back from the console.

Deployment options

Cloud (SaaS)

Available

Policy and FleetControl in the TotalHeal cloud; appliances at your sites.

On-premises

Available

Delivered with our team from the on-premises kit.

Air-gapped

Available

Offline kit, offline licence file and offline update bundles.

System requirements

Protected platforms

BranchEdge appliance

Debian 12 or Ubuntu 22.04+, x86-64 or arm64, two or more network ports

Virtual or cloud

Any hypervisor or cloud instance running the same Linux

On-premises server

Operating system

RHEL, Rocky Linux or AlmaLinux 8 / 9; Ubuntu 20.04, 22.04 or 24.04; Debian 11 / 12

Processor

4 vCPU (tested configuration)

Memory

8 GB recommended (6 GB minimum)

Disk

10 GB free for software, releases and backups, plus data

Sign-in

Active Directory / LDAP, SAML 2.0 or OpenID Connect

Software

Nothing to pre-install: no container runtime, database, web server or Java

Network and access

- A BranchEdge appliance at each site (installer: --branchedge, with --with-ips and --with-av for the IPS and antivirus)
- The TotalHeal root trusted on devices for HTTPS inspection

Technical specifications

Features	Included		
Rules by what and who	✓ Included		
Threat intelligence both ways	✓ Included		
Know what each rule does	✓ Included		
IPS	✓ Included		
HTTPS inspection	✓ Included		
Antivirus in transit	✓ Included		
Cloud firewall for branches	✓ Included		
Safe changes	✓ Included		
Availability by tier	Essential	Professional	Elite
Stateful rules by zone, address and service objects, applications (domain, address and port) and people's groups; NAT and port forwards	✓ Included	✓ Included	✓ Included
TotalHeal threat intelligence blocked both ways; SYN-flood and connection limits; your own blocked addresses	✓ Included	✓ Included	✓ Included
Hit count per rule, unused-rule report; every policy version kept; automatic roll-back when an appliance loses the cloud after a change	✓ Included	✓ Included	✓ Included
Cloud firewall: branches' internet through a hub appliance (TotalHeal cloud or your data centre)	✓ Included	✓ Included	✓ Included
IPS (Suricata) in detect or block mode with TotalHeal rules and your own; alerts in TotalHeal	—	✓ Included	✓ Included
HTTPS inspection with exempt categories (online banking by default) and domains	—	✓ Included	✓ Included
Country blocking; policy changes approved by a second administrator	—	✓ Included	✓ Included

Antivirus on files in transit (ClamAV); malware blocked with a page and an alert	—	—	✔ Included
Blocks from TotalHeal responses reach the appliances; high-availability pairs (VRRP)	—	—	✔ Included
List price per appliance per year	US\$240 · ₹22,840	US\$420 · ₹39,970	US\$600 · ₹57,100
Platforms and coverage			
Appliance	Any x86-64 or arm64 box with two or more network ports, Debian 12 or Ubuntu 22.04+ (hardware, virtual machine or cloud instance)		
Data plane	nftables (one table, applied in a single transaction), Suricata for the IPS, ClamAV for files in transit		
Console	TotalHeal web console: FireWarden and FleetControl		
Deployment options			
SaaS	✔ Available Policy and FleetControl in the TotalHeal cloud; appliances at your sites.		
On-premises control plane	✔ Available Delivered with our team from the on-premises kit.		
Air-gapped	✔ Available Offline kit, offline licence file and offline update bundles.		
Licensing			
Priced per	appliance per year		
Counted	BranchEdge appliances running FireWarden		
Trial	30 days, up to 2 appliances		
Editions	FireWarden is sold on its own, per appliance; FleetControl is included.		
Government profile	Government is a profile, not a separate tier or price list: the Elite tier with Government defaults switched on — data residency in India, four-eyes approval of policy changes, a distinct approver for every approval-level action, retention of at least 180 days, and the CERT-In and DPDP reporting clocks.		
Procurement dossier	Compliance matrix, bill of materials, architecture and hardening, SLA and OEM authorisation letter, on request		
On-premises server			
Operating system	RHEL, Rocky Linux or AlmaLinux 8 / 9; Ubuntu 20.04, 22.04 or 24.04; Debian 11 / 12		
Processor	4 vCPU (tested configuration)		
Memory	8 GB recommended (6 GB minimum)		
Disk	10 GB free for software, releases and backups, plus data		

Sign-in	Active Directory / LDAP, SAML 2.0 or OpenID Connect
Software	Nothing to pre-install: no container runtime, database, web server or Java
Requirements	
Requirement 1	A BranchEdge appliance at each site (installer: --brandedge, with --with-ips and --with-av for the IPS and antivirus)
Requirement 2	The TotalHeal root trusted on devices for HTTPS inspection
