

PRESS RELEASE

FOR IMMEDIATE RELEASE · Noida, India · 30 October 2026

TotalHeal keeps security events for 180 days by default for organisations in India

A retention floor in line with CERT-In's directions, switched on for every Indian organisation and Government deployment at no extra cost. Also this month: on-premises and air-gapped TotalHeal as a pilot, and CyberAware training with courses in Hindi.

180 days

default security-event retention for organisations in India

34

security products available on one console

6

CyberAware courses in early access, three in Hindi

3

Linux distributions tested for the on-premises kit

Noida, India, 30 October 2026 — TotalHeal, the security platform from Freaquer Corporation Pvt Ltd, now keeps security events for at least 180 days by default. The floor applies to organisations in India, to Government deployments and to privileged-session recordings, in line with CERT-In's directions on log retention. It is on by default and is not a paid add-on.

TotalHeal offers 34 security products for organisations, each sold on its own and run from one web console — endpoint management, secure access, web and network protection, and security operations — alongside TotalHeal for home. Every feature shows an honest status, and the price is the same at renewal.

On-premises and air-gapped, from one signed kit

Organisations that must keep data inside their own network can now run the TotalHeal control plane on their own Linux server from one signed kit. It has been tested on Rocky Linux 8, Ubuntu 20.04 and Debian 12, and supports sign-in with Active Directory / LDAP, SAML 2.0 and OpenID Connect. It is offered as a pilot on request.

Security awareness training, in Hindi as well as English

TotalHeal CyberAware is available in early access for organisations. It includes six courses — three of them in Hindi — assignments with automatic reminders, a learner portal, signed completion certificates and a compliance report for audits. Phishing simulation is coming later.

Also published this month

LogIntelligence, ThreatFusion and ResponseFlow (SIEM, XDR and SOAR) moved to early access. RemoteLink session recordings are now encrypted at rest. TotalHeal Video Wall brings SOC views to every screen in the room, with per-screen layouts, schedules and a kiosk client that reconnects by itself. Desktop 0.3.9 for macOS and Windows runs only the modules a licence covers and includes a restore command for files an older build quarantined by mistake.

Availability

TotalHeal for home offers a 30-day trial on every new device; Family covers 5 devices at ₹1,299 a year and Ultimate 10 devices at ₹1,999 a year. Organisation products are available from totalhealsecurity.com. Journalists can request a console demonstration on a live tenant, the validation method used before any product is marked available, and an interview with the technical lead.

About TotalHeal. TotalHeal is a security platform from Freaquer Corporation Pvt Ltd, an Indian technology company. For homes, TotalHeal protects computers, browsing, privacy and families — not just antivirus — with Personal, Family and Ultimate plans and a 30-day trial on every new device. For organisations, it offers security products sold on their own and run from one web console: endpoint management, secure access, web and network protection, and security operations, in the cloud, on-premises or air-gapped. TotalHeal's promise is protection without panic: no scareware, honest status for every feature and the same price at renewal. Free to quote in full or in part.
